SUBJECT INDEX

Acetic acid 299
AgBr
  band structure 223
  exciton band diagram 224
  exciton decay rates 225
  indirect excitons 223
  scattering rate of indirect exciton in 225
  time-resolved resonant Raman scattering spectra 226

Batteries
  fully-polymeric, thin film 61
  lithium 316
  organic electrolyte 56
  solid-state 59
Bound excitons 210

Catalysts, sol–gel process 325
CdS
  computed polariton density of states and emission spectra 228
  effect of impurity trapping rate on 233
  excitation spectra of degrees of polarization 237
  lower branch polaritons in 231
  theoretical inverse loss rates and decay times of polaritons in 232
  time decay of polaritons in 234
  time-resolved polariton population in 229
Ceramics
  ferroelectric 323
  magnetic 324
  sol–gel process 323
Charge–pH diagram 262–264
Chelating ligands 299
Chemical sensors 177
  compatibility aspects 178
  development of 177
  devices considered 178
  ideal 178
  importance of 178
  interferometric configurations 191
  see also specific devices
Chromic oxide 321
Chromium hydrous oxide sols 285
Cobalt oxides 322
Concentration quenching 129
Conducting polymers
  applications 56
  as electrochemical devices 6
  diffusion of dopant ions in polymer films 15
  discovery of 1
  electrochemical doping processes 25
  electrochemical polarization in 21
  electrochemical properties of 1
  electronic devices 68
  electronic structure in 8
  heterocyclic 42
  optical absorption 18, 65
  optical properties of 13
  processes inducing high electronic conductivity 4
Configurational coordinate diagrams 81, 116
Copper hydroxide gels 269
Copper oxide 322
Cu_2O
  forbidden excitons in 215
  luminescence 219
  photoluminescence 216

Delocalisation
  of electronic charge 152
  semiconductors 154
Diffusion studies in polymer films 24
Dye lasers 203

Electric-dipole transitions 86
Electrochemical polarization in conducting polymers 21
Electrochemical properties of conducting polymers 1
Electrochromic displays 65
Electromagnetic radiation 210
Electron-hole plasmas 247–251
  in GaAs 247
Electronic excited state 81
  delocalisation vs relaxation 152
  strong relaxation 153
Electronic ground state 81
Electronic states parabolae 81
Energy migration 129, 144
Energy transfer
  and radiative probabilities 140
  between identical centres 129
  between unlike centres 124
  intermediate- and strong-coupling scheme ions 146
  weak-coupling scheme ions 130
Excitation and probe techniques 207
Excitons
  dispersion curves 212
  forbidden 215
  indirect 223
  interaction with photons and phonons 208, 213
  interaction with radiation and polaritons 210
  localized 236
  theory of 208
  thermalization of 201

Fabry–Perot interferometer 191, 192
Fast signals, detection of 205
γ-Fe_2O_3 colloids, magnetic ordering in 305
Fe_3O_4 colloids interface 318
Fibre optic sensors 193
Fractal geometry 301
Frenkel excitons 209
Frohlich interaction 248

$Ga_{1-x}Al_xAs$, photoluminescence in 240
GaAs
  cooling curve of warm EHP excited 249
  electron-hole plasmas in 247

intravalley electron–phonon scattering times 248
steady state emission spectra 234
time resolved emission spectra 235
Glasses, sol–gel process 324

Heterocyclic polymers 42
cyclability in lithium cells 49
Hydrolysis ratio 293, 294, 296
Hydrous chromic oxide gels 270
Hydrous ferric oxide 321
Hydrous yttrium oxide 322

Immunosensors 196
Inorganic precursors
aqueous chemistry of 260
condensation reactions 264
formation of 261
most acid forms 263
most basic forms 264
nucleophilic strength 267
polycations 266
precipitation and gelation 268
tetrahedral 275

Kerr shutter 206

Laser systems, pulse generations 203
Lithium batteries 316
Luminescence
and crystal structure 80
and electronic states 80
Cu_2O 219
isolated luminescent centre 81
of inorganic solids 79
application 157
intermediate- and strong-coupling case 90
nonradiative transitions 114
weak-coupling case 87
orthoexciton 217, 218
paraexciton 218

Mach Zehnder interferometer 191, 192
Manganese oxides 321
Maxwell–Boltzmann distribution 227
Metal alkoxides 286
chemical modification 296
hydrolysis and condensation 286
Metal chloride alkoxides 298
Metal-oxide semiconductor field effect transistor (MOSFET) 180
Metal-oxide semiconductor (MOS) devices 179
Michelson interferometer 191, 192
Molecular beam epitaxy (MBE) 234, 235

n-doping 4, 26, 40, 61
Nd : glass lasers 203
Nd : YAG lasers 203
Nickel hydroxide gels 269
Nickel oxides 322
Niobium pentoxide 322
Noble metal oxides, sol–gel process 323

Olation mechanisms 265
Optical absorption 82–83
conducting polymers 18, 65
Optical excitation 201
Optical gating 206
Optical interferometry 191
Optical properties of conducting polymers 13
Optical sensors 191
Optical transitions 87
Organic precursors, metal molecular 286
Oxo-alkoxides 293
Oxolation mechanism 272

p-doping 4, 26, 35, 61
Partial Charge Model 268
pH sensor 193, 194
Phonons, exciton interaction with 213
Photoluminescence
Cu_2O 216
in $Ga_{1-x}Al_xAs$ 240
Photons, dispersion curves 212
Piezoelectric sensors 182
Polaritons
density of states in CdS 228
dispersion curves 212
in direct bandgap semiconductors 227
lower branch, in CdS 231
theoretical inverse loss rates and decay times in CdS 232
time decay in CdS 234
Polyacetylene 61
band structure 12
changes in conductivity upon exposure to halogens 2
changes of structure on doping 41
cis and *trans* structures of 1
cyclic voltammetry 30, 38, 39
electrically conducting 1
electrochemical oxidation 27
electrochemical polarization 21
electrochemical reduction 37
formation of charged solitons 12
free-standing films 2
isotope tracers in 15
optical absorption spectra 14
oxidation or p-doping 26
oxidation process 7
reduction or n-doping 26
reduction process 7
room temperature conductivity 2
temperature dependence of conductivity 3
Polyaniline 54
electrochromic properties 67
electropolymerization 55
mechanism of formation 54
Polydithienothiophene (PDTT) 47
absorption spectra 51
complex impedance plots 52, 53
self-discharge 53
Poly(ethylene oxide) 61
electrolyte conductivity 63
Polyisothionaphthene
cyclic voltammetry 66
electrochromic displays 66
Polymer electrodes
electrochemical stability 50
fast self-discharge 52

heterocyclic 50
self-discharge 53
undoping of 53
Polymer films, diffusion studies in 24
Poly(3-methylthiophene) (PMeT), electrochemical doping-undoping mechanism 48
Polypyrrole 42
absorption spectra 51
band structure 13
conduction mechanism 8
cyclic voltammetry 45, 64
cycling charge–discharge efficiency 49
electrochemical doping processes 45
electrodeposition 43
electronic structure 9
electropolymerization 43
electrosynthesis 44
junction diodes 68
molecule-based transistor 68
morphological characteristics 44
oxidation or p-doping 26
oxidation process 7
solid-state cells 62
Polythiophene 42
absorption spectra 51
conduction mechanism 8, 10
cyclic voltammetry 47
cycling charge-discharge efficiency 49
electrochemical doping processes 45
electrochemical properties 48
electrochemical synthesis 47
electrochromic properties 67
junction diodes 68
optical absorption 13
oxidation or p-doping 26
oxidation process 7
Polyvinil carbozole, electrochromic properties 67
Progress in Solid State Chemistry 173
Pyroelectric sensors 194
equivalent circuit 195

Rate equations 214
one exciton level model 214
two exciton levels model 215

SAW gas sensor 183
frequency shift detection technique 190
performance testing 187
phase shift detection technique 188, 190
schematic representation of 187
time response of 188
Secondary Ion Mass Spectroscopy (SIMS) 48
Semiconductors
colloidal 316
delocalisation 154
direct bandgap 209, 227
exciton emission 236
indirect bandgap 209, 223
Short pulses, generation of 202
Silicates, organically modified 300
Silicon, amorphous hydrogenated 241
Sol–gel process 259
binary system ceramics 324
catalysts 325
chemistry of 259
divalent metal oxides 269
ferroelectric ceramics 323
glasses 324
hexavalent metal oxides 277
inorganic precursors 260
multicomponent ceramics 323
noble metal oxides 323
pentavalent metal oxides 276
properties of 259
tetravalent metal oxides 272
transition metal oxides 320
trivalent metal oxides 270
vitroceramics 324
Stokes shift 85, 109, 111
Streak cameras 206
Surface acoustic wave propagation 183
Surface acoustic wave sensors. *See* SAW gas sensor

Tantalum pentoxide 322
Thermal equilibrium 201
Thermalization 201
Time-delayed coincidence photon counting 205
Time-to-amplitude converter 206
Titanium alkoxides 292
Titanium oxide 320
Transition metal alkoxides 291
Transition metal oxide colloids, anisotropic aggregates 301
Transition metal oxide gels 309
electrochemical properties 315
electronic properties 309
fast proton conduction 313
interfacial properties 316
ion exchange 312
ionic properties 312
small polaron hopping 309
Transition metal oxides
sol–gel chemistry 259
sol–gel process 320
Transition metal polycations 266
Tungsten oxide 323

Vanadium pentoxide (V_2O_5) gels 276, 321
intercalation of metal cations 306
intercalation of molecular ions 307
intercalation properties 306
mixed conduction 313
swelling in organic solvents 308
Vanadium pentoxide (V_2O_5) xerogels 310
Vitroceramics, sol–gel process 324

Wannier excitons 209
Warburg impedance 35

Zirconium oxide 322
